AMENDMENT TO THE CLAIMS

This listing of claims will replace all prior versions and listings of claims in the

application:

LISTING OF CLAIMS

1. (canceled)

2. (canceled)

3. (canceled)

4. (canceled)

5. (currently amended) ~~The method of Claim 1~~ A method for transaction processing of a

search transaction comprising the steps of:

a) receiving a plurality of search queries from users, each of said plurality of

search queries including search criteria and including a user address;

b) normalizing said search criteria so as to obtain a single normalized search

criteria for said plurality of search queries;

c) transmitting said single normalized search criteria to a search engine;

d) receiving a response from said search engine that includes search results;

e) generating a response to each of said search queries from users, each

response including search results corresponding to the search criteria submitted by

that particular user; and

f) transmitting said responses to each of said users, wherein step b) further comprises:

b1) comparing said search criteria from each of said queries;

b2) determining commonalities between said search criteria; and

b3) generating normalized search criteria, said normalized search criteria

consolidated based on the commonalities determined in step b2) so as to eliminate

redundant search criteria.

6. (currently amended) The method of Claim ~~4~~ 5 wherein said search engine is a software

program operable on a first computing device, said steps a)-c) performed by a

second computing device that is coupled to said first computing device.

7. (original) The method of Claim 6 wherein said first computing device is coupled to

said second computing device using a local area network.

8. (original) The method of Claim 6 wherein said first computing device is coupled to

said second computing device using a wide area network.

9. (original) The method of Claim 6 wherein said first computing device is coupled to

said second computing device via the Internet.

10. (currently amended) The method of Claim ~~4~~ 5 wherein said search engine is a first

software program operable on a first computing device, said steps a)-c) performed by a

second software program operable on said first computing device.

12. (canceled)

13. (canceled)

14. (canceled)

15. (currently amended) ~~The method of Claim 11~~ In a computer system including a processor

coupled to a bus, and a memory unit coupled to the bus for storing information, a computer-

implemented method for communicating with a user comprising the steps of:

a) receiving a plurality of search queries from users, each of said plurality of

search queries including search criteria and including a user address;

b) normalizing said search criteria so as to obtain a single normalized search

criteria for said plurality of search queries;

c) transmitting said single normalized search criteria to a search engine;

d) receiving a response from said search engine that includes search results;

e) generating a response to each of said search queries from users, each

response including search results corresponding to the search criteria submitted by

that particular user; and

f) transmitting said responses to each of said users, wherein step b) further comprises:

b1) comparing said search criteria from each of said queries;

b2) determining commonalities between said search criteria; and

b3) generating normalized search criteria, said normalized search criteria

consolidated based on the commonalities determined in step b2) so as to eliminate

redundant search criteria.

16. (currently amended) A system for transaction processing of a search transaction

comprising:

a) a first computing system including a search engine program operable to

search a database;

b) a second computing system including at least one computing device that is

coupled to the Internet, said second computing system coupled to said first

computing system; and

c) a software program operable on said first computing device for receiving a

plurality of search queries from users, each of said plurality of search queries including

search criteria and including a user address, said software program operable to

normalize said search criteria so as to obtain a single normalized search criteria for

said pluralities of search queries and operable to transmit said normalized search

criteria to said first computing system, wherein the software program is operable to

receive a response from said first computing device that includes search results, and

is operable to generate a response to each of said search queries from users, each

response including search results corresponding to the search criteria submitted by

that particular user, and is operable to transmit said responses to each of said users, wherein step b) further comprises:

b1) comparing said search criteria from each of said queries;

b2) determining commonalities between said search criteria; and

b3) generating normalized search criteria, said normalized search criteria consolidated based on the commonalities determined in step b2) so as to eliminate redundant search criteria.

17. (canceled)

18. (canceled)

19. (canceled)

20. (currently amended) ~~A computer readable medium as described in Claim 18~~ In a computer system having a processor coupled to a bus, a computer readable medium coupled to said bus and having stored therein a computer program that when executed by said processor causes said computer system to implement a method for transaction processing of a search transaction, said method comprising the steps of:

a) receiving a plurality of search queries from users, each of said plurality of search queries including search criteria and including a user address;

b) normalizing said search criteria so as to obtain a single normalized search criteria for said plurality of search queries;

c) transmitting said single normalized search criteria to a search engine;

d) receiving a response from said search engine that includes search results;

e) generating a response to each of said search queries from users, each response including search results corresponding to the search criteria submitted by that particular user; and

f) transmitting said responses to each of said users, wherein step b) of said computer implemented method stored on said computer readable medium further comprises the steps of:

b1) comparing said search criteria from each of said queries;

b2) determining commonalities between said search criteria; and

b3) generating normalized search criteria, said normalized search criteria consolidated based on the commonalities determined in step b2) so as to eliminate redundant search criteria.

21. (previously presented) The computer readable medium of Claim 20 wherein said search engine is a software program operable on a first computing device, said steps a)-c) performed by a second computing device that is coupled to said first computing device.

22. (new) The method of Claim 5 wherein said c) further comprises transmitting said user addresses to said search engine.

23. (new) The method of Claim 22 wherein the search engine is operable to

generate search results and to generate a response to each of said search queries

using said user addresses, said response transmitted from said search engine to each

of said users.

24. (new) The computer-implemented method of Claim 15 wherein said c) further comprises

transmitting said user addresses to said search engine.

25. (new) The computer-implemented method of Claim 24 wherein the search

engine is operable to generate search results and to generate a response to each of

said search queries using said user addresses, said response transmitted from said

search engine to each of said users.
